Archias' Quality Grasses

Practical Information On How To Make a Better Lawn Given FREE With Every Order of Lawn Seed and Supplies.

ARCHIAS' "MISSOURI GROWN" KENTUCKY BLUE GRASS

Used more for lawns than any other grass. However, should be mixed with other quicker growing grasses—especially valuable as a pasture grass. Archias' Kentucky Blue Grass is Missouri grown and acclimated. Thoroughly recleaned, free of weeds and of high germination. Sow 1 lb. to each 200 square feet for lawn; 3 bushels to the acre for pasture. **Lb., 30c; 3 lbs., 85c; 10 lbs., \$2.50; 25 lbs., \$6.00, postpaid.**

ITALIAN RYE GRASS. American grown. An annual grass with tall, broad, flat leaves; plants grow in tufts if left uncut. Very valuable for winter and spring lawns with its quick growth. **Lb., 25c; 5 lbs., 85c; 10 lbs., \$1.50, postpaid.**

RED TOP. Recleaned seed. Grows well in almost any soil and is valuable either for meadows, pasture or lawns, especially so for moist land. About 15 pounds to the acre. **Lb., 35c; 3 lbs., \$1.00; 10 lbs., \$3.00, postpaid.**

WHITE DUTCH CLOVER (*Trifolium repens*). Valuable in lawn grass mixtures and indispensable in pasture mixtures. **Lb., 80c; 5 lbs., \$3.65, postpaid.**

ARCHIAS' TERRACE SOD LAWN GRASS. Best mixture for terraces and side hills, preventing heavy rains from washing. Withstands drought, produces a rich, velvety green turf all season. **Lb., 40c; 3 lbs., \$1.10; 10 lbs., \$3.00, postpaid.**

ARCHIAS' "SHADY NOOK" LAWN MIXTURE. For a Shady Lawn. A mixture of grasses that will thrive in a shady situation, under trees or close to the walls where there is little sun. **Lb., 45c; 3 lbs., \$1.25; 10 lbs., \$3.50, postpaid.**

For Seed Sowers, see page 14.

Archias' Dandelion and Weed Killer KILLS NOXIOUS WEEDS AND GRASSES AND FERTILIZES LAWNS AT ONE TREATMENT

Recent experiments with Nitrogenous Salts prove that noxious grasses and weeds such as Chickweeds, Dandelions, and other weeds, which ruin good lawns, may be killed with **ARCHIAS' WEED KILLER**, which then fertilizes the soil for grasses of a desirable nature, such as Blue Grass, Red Top, etc. Do not use on Clover.

Will not harm Blue Grass and desirable lawn grasses in the quantities we recommend.

DIRECTIONS: Mix one (1) pound of **Archias' Weed Killer** to one gallon water. Sprinkle over 250 sq. ft. of lawn. Use this proportion up until March 15th. After March 15th, sprinkle the above mixture over 600 sq. ft. We recommend 4 to 6 applications in the spring at intervals of about a week apart. It is a gradual program and not an overnight cure.

5 lbs., 45c; 10 lbs., 80c; 25 lbs., \$1.45; 50 lbs., \$2.25; 100 lbs., \$3.50.

SUGGESTIONS FOR MAKING A GOOD LAWN

Seeding may be done to best advantage in early spring or fall, but Grass Seed can be sown with good results at almost any time during the spring or summer.

New Lawns—Thoroughly pulverize the surface about two inches deep. Work in a good fertilizer, Sheep Manure or Vigoro, then plant Archias' "Evergreen" Mixture—1 pound to every 200 square feet. Rake seed in thoroughly and keep well watered until seeds germinate. A lawn can be kept thick and flourishing if at intervals the soil is stirred with a sharp rake and more seed sown. If rolled immediately after sowing, seeds will be better covered. It pays to top-dress your lawn twice a year with a good fertilizer.

VITAMIN B₁

(Pure Crystalline Powder)

As featured in "Better Homes and Gardens"

HOME GARDENERS ACHIEVE SENSATIONAL RESULTS WITH AMAZING NEW VITAMIN DISCOVERY

Vitamins are as essential to plant life as they are to human beings. Scientists at California Institute of Technology report almost miraculous results from using Vitamin B-1 on a widely diversified variety of plants. Plants treated with Vitamin B-1 have produced more luxuriant foliage, larger blooms, earlier maturity of flowers and fruits. Seeds immersed in Vitamin B-1 before planting (and seedlings watered with the solution) produced much hardier, faster growing plants.

STATE CERTIFIED MISSOURI No. 8

Missouri No. 8 is a smooth soft yellow Corn preferred by feeders over a flinty hard type. It produces two ears under favorable conditions and is resistant to drought, insects and disease, maturing in 120 to 125 days. Missouri No. 8 has been tested in Missouri for many years and has proven year after year to be superior to the best open pollinated varieties under the same conditions. The average yield has been 36% better than Reid's Yellow Dent and over 22% greater than Midland Yellow.

STATE CERTIFIED MISSOURI HYBRID No. 47

This hybrid is very similar to the famous Illinois 960 except that it does not grow so tall. Probably best adapted to northern half or two-thirds of Missouri. No tests in Iowa or Illinois. Five to seven days later than Illinois 960. Stands up well, somewhat large stalk.

Certified and recommended by Missouri College of Agriculture as a satisfactory Earlier Maturing Variety. Its similarity in pedigree to Illinois 960, along with good showing in 1937 yield tests placed it among the better hybrids for Missouri.

ILLINOIS HYBRID No. 960

(Certified by the Illinois Crop Improvement Assn.)

Adapted to nearly all of Missouri, southern Iowa, northern Kentucky, southern two-thirds Illinois. Probably the most widely adapted hybrid in present production.

A hybrid of medium early maturity. Tends to two ears. Grows somewhat taller than many hybrids. Has good strong stalk, although the stalk is not as large as some hybrids. Good root system, and stands up well.

Illinois 960 made an excellent record in Missouri during 1939.

JEWETT HYBRIDS No. 6, 11, 23, 36

Jewett Hybrids are outstanding in Corn production in Missouri. Their record for 1939 is at the top. Being bred to produce a record crop even in our dry years, Jewett Hybrids are proving themselves to be among the finest for Missouri. The breeding work for Jewett Hybrids has all been done in Missouri under Missouri's climatic conditions; hence, drought resistance and ability to produce during our dry summers is bred into the strain. We offer all of the Jewett numbers. We would be pleased to mail you complete information and lowest prices upon receipt of your request.

IOWA HYBRID No. 13

FUNKS "G" 235. Early maturity. G-235 is a consistent performer on soils of average fertility. During the past few seasons this hybrid has demonstrated its ability to make high yields under unusually wide range of conditions. This hybrid produces several two-eared plants, about 50%. G-235 has excellent grain quality ears at about waist height.

FUNKS "G" 244. Early maturity. One of the finest hybrids produced for use over a wide variety of soil types and fertility levels. You will find G-244 consistently in the upper bracket in a wide range of official tests. This is a two-eared hybrid with good stalks, medium height, stand up well, and ears about chest high. The use of B-K for sterilizing milk utensils, coolers, bottle fillers, pipings, vats, and other equipment gives higher germicidal efficiency at lower cost. The cost of sterilizing with B-K is so low that it is a fraction of a cent for several thousand bottles.
